

FIG.1

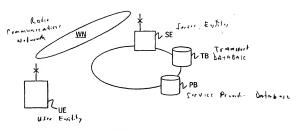

FIG.2

"REPLACEMENT SHEET"

S1 – a user defines at least one itinerary search criterion

S2 – a request is sent to the server entity SE. This request comprises at least one itinerary search criterion and one service

S3 — the server entity SE computes an itinerary from the search criterion or criteria comprised in the request for the various transport modes

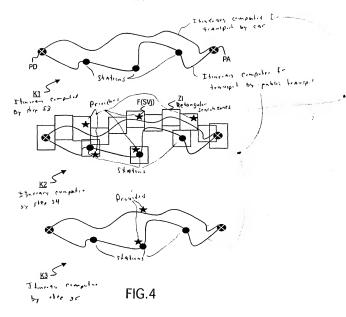

S4 – the server entity selects for each service indicated in the itinerary search request for the various transport modes

S5 – the server entity elaborates a response which comprises the computed itinerary with localization of the selected providers for the various transport modes

S6— the user entity receives the response and presents it to the user

FIG. 3

REPLACEMENT SHEET.
